

# Science

## Years 3 and 4

During Term 1 students in Years 3/4 will be focussing on 'Biological Sciences'. They will be exploring how living things have different life cycles and depend on each other and the environment to survive.

Throughout Term 1 students will explore the local environment learning the differences between producers, consumers and decomposers and their roles in an ecosystem. They will conduct a simple experiment looking at environmental changes and it's effect on micro organisms and composting.

With guidance students will identify questions in familiar contexts that can be investigated scientifically and predict what might happen based on prior knowledge.
